Notice of Allowability	Application No.	Applicant(s)
	09/893,740	DOHERTY ET AL.
	Examiner	Art Unit
	Mahammad A. Ciddini	2454
	Mohammad A. Siddiqi	2154
The MAILING DATE of this communication appears on the cover sheet with the correspondence address All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.		
1. This communication is responsive to <u>11/16/2005</u> .		
2. The allowed claim(s) is/are <u>78-80, 82-84,89-90,92-94</u> .		
 3. ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) ☐ All b) ☐ Some* c) ☐ None of the: 1. ☐ Certified copies of the priority documents have been received. 		
2. Certified copies of the priority documents have been received in Application No		
3. Copies of the certified copies of the priority documents have been received in this national stage application from the		
International Bureau (PCT Rule 17.2(a)).		
* Certified copies not received:		
Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application. THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.		
4. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.		
5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.		
. (a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached		
1) 🗌 hereto or 2) 🔲 to Paper No./Mail Date		
(b) ☐ including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date		
Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).		
6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.		
Attachment(s) 1. ⊠ Notice of References Cited (PTO-892)	5. Notice of Informal	Patent Application (PTO-152)
2. Notice of Draftperson's Patent Drawing Review (PTO-948)	6. ⊠ Interview Summar Paper No./Mail Da	y (PTO-413),
3. Information Disclosure Statements (PTO-1449 or PTO/SB/0 Paper No./Mail Date	·	
4. Examiner's Comment Regarding Requirement for Deposit of Biological Material	9. ☐ Other	nent of Reasons for Allowance

DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mark R. Kendrick on 02/15/2006.

- 2. Please amend the claims as attached.
- 3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mohammad A. Siddiqi whose telephone number is (571) 272-3976. The examiner can normally be reached on Monday -Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, John A. Follansbee can be reached on (571) 272-

Application/Control Number: 09/893,740

IN THE CLAIMS:

Please amend the claims as follows:

Claims 1 - 77 (canceled).

78. (currently amended) A system, comprising:

a client device, the client transmitting a request for an operating system utilizing the BOOTP protocol and setting an indicator identifying that this boot sequence is being made to a management server, a first virtual local area network (VLAN) including the client device;

a pre-boot execution environment (PXE) agent device, the PXE agent device located on a first local area network with the client device, to receive the BOOTP request for the operating system, to open a hypertext transport protocol (HTTP) session, to convert the BOOTP request for the operating system to a HTTP request for the operating system; and to transmit the HTTP request for the operating system; and

a pre-boot execution environment (PXE) server, the PXE server being located on a second local area network separated by at least one router from the first local area network and a second VLAN, distinct from the first VLAN, including the PXE server, to receive the converted HTTP request for the

Art Unit: 2154

operating system, to retrieve the operating system requested in the converted HTTP request, and to transmit the retrieved operating system via HTTP, wherein the PXE agent device receives the retrieved operating system via HTTP, converts the HTTP protocol to the BOOTP protocol, and transmits the retrieved operating system to the client device utilizing the BOOTP protocol, wherein the client sets an indicator identifying that this boot sequence is being made to a PXE server.

- 79. (previously presented) The system of claim 78, wherein the PXE client and the PXE agent device communicate in a virtual local area network (VLAN).
- 80. (previously presented) The system of claim 78, wherein at least a switch physically separates the PXE client and the PXE server.
- 81. (cancelled).
- 82. (currently amended) A method for operating a management server, comprising:

Art Unit: 2154

receiving a pre-boot request from a PXE client, the PXE client requesting booting information <u>utilizing the hypertext transport protocol</u> (HTTP);

querying a management database for booting information for the PXE client;

receiving the booting information from the management database if the management database has the booting information for the PXE client, the booting information including instructions to install a specific operating system if the management database has booting information for the PXE client;

transmitting, utilizing HTTP, both the instructions to install a specific operating system and the operating system to the PXE client if the management database has booting information for the PXE client; and

transmitting, utilizing HTTP, a command for the PXE client to boot locally if the management database does not have booting information for the PXE client and default information in the management server for the PXE client indicates the PXE client should boot locally, wherein a first virtual local area network (VLAN) includes the PXE client and a second VLAN includes the management server, the first VLAN being distinct from the second VLAN.

Art Unit: 2154

83. (previously presented) The method of claim 82, further including transmitting a command to the PXE client to boot to an operating system on a network if the management information does not have booting information for the PXE client and the management server does not have default information for the PXE client

- 84. (previously presented) The method of claim 82, wherein one of a switch or a router physically separates the client and the management server.
- 85. (cancelled).
- 86. (cancelled)
- 87. (cancelled)
- 88. (cancelled).
- 89. (currently amended) A method of utilizing a pre-boot execution environment (PXE) agent device, comprising:

Art Unit: 2154

receiving a request for an operating system, the client transmitting the request utilizing the BOOTP protocol;

opening a hypertext transport protocol (HTTP) session;
converting the request for the operating system from the BOOTP
protocol to a HTTP request which utilizes an HTTP protocol;

transmitting the HTTP request for the operating system utilizing the HTTP protocol to a PXE server, the PXE server being located on a second local area network separated by at least one router from the first local area network;

receiving a retrieved operating system from PXE server utilizing the HTTP protocol;

converting the HTTP protocol to the BOOTP protocol; and transmitting the retrieved operating system to the PXE client device utilizing the BOOTP protocol, wherein a first virtual local area network

(VLAN) includes the PXE client and a second VLAN includes the PXE server, the first VLAN being distinct from the second VLAN.

- 90. (previously presented) The method of claim 89 wherein the PXE client and the PXE agent device communicate in a virtual local area network.
- 91. (cancelled).

Art Unit: 2154

92. (currently amended) A program code storage device, comprising: a computer-readable storage medium; and

computer-readable data, stored on the computer-readable storage medium, the computer-readable data including instructions, which when executed, cause a processor to:

receive a pre-boot request from a PXE client, the PXE client requesting booting information <u>utilizing the hypertext transport protocol (HTTP)</u>;

query a management database for booting information for the PXE client;

receive the booting information from the management database if the management database has booting information for the PXE client, the booting information including instructions to install a specific operating system if the management database has booting information for the PXE client;

transmit, utilizing HTTP, both the instructions to install a specific operating system and the operating system to the PXE client if the management database has booting information for the PXE client; and

transmit, utilizing HTTP, a command for the PXE client to boot locally if the management database does not have booting information for the PXE client and default information in the management server for the PXE client indicates the PXE client should boot locally, wherein a first virtual local area

Application/Control Number: 09/893,740

Art Unit: 2154

network (VLAN) includes the PXE client and a second VLAN includes the management server, the first VLAN being distinct from the second VLAN.

Page 10

93. (previously presented) The program code storage device of claim 92, including instructions which when executed cause the processor to transmit a command to the PXE client to boot to an operating system on a network if the management information does not have booting information for the PXE client and the management server does not have default information for the PXE client

94. (previously presented) The program code storage device of claim 92, wherein one of a switch or a router physically separates the client and the management server.

95. (cancelled).
